

Dogma is to be disproved.

ViV laboratory

evanui μ

Omnidirectional Speaker with 2" FDM Driver

evanui μ

small, but enough.

Concept

We aimed a speaker system small and reasonable enough not only for high-end audiophile but anyone who loves music. No doubt that nobody believes its full-scale sound with high purity from such a small speaker.

Technology

- Brand new 2" FDM full-range Driver

"evanui μ " is mounted with the original brand new 2" FDM (Floating Diaphragm Mechanism) full-range driver. The FDM driver has neither surround nor damper that enables wide range sound with ultra low distortion.

- 100% Walnut enclosure

The enclosure is curved from compiled walnut block. The block is compiled as the grain of each piece of 18mm board crossed alternately, which diffuses vibration mode. With its round and baffle-less shape, evanui μ generates unbelievable, wonderful field of music.

- Marble stone base

The base plate is made of Marble stone. It is fixed to the enclosure with magnet, and supports the enclosure tightly against the vibration of the diaphragm. We are going to release the other types of bases and stands that can hold evanui μ by magnet as option.

- Square magnet wire

The voice coil is made with square wire, which results in nearly 30% higher volumetric occupancy ratio than conventional round wire.

- No acoustic absorption material

We achieved to eliminate acoustic absorption material. It brings unbelievably clear sound.

Profile

System	:	single driver omnidirectional speaker
Driver	:	2 inchs FDM driver with alminium diaphragm
Impedance	:	8 Ω
Freq. range	:	60~30,000Hz
Efficiency	:	83dB (2.83V / 1m)
Input	:	50W
Max. input	:	100W
Size / Weight	:	H23cm W14cm D15cm 2.3kg
